President Sirisena of Sri Lanka has ordered the execution of four ... contain fewer toxins than cigarettes

The bungalow is at least twice as well insulated as one built in the usual way.

New York, said: “For cig... of the toxins that make c... smokers who specialise in the eco... at Georgia State University who specialises in extracurricular activities. "We asked to speak with their house... and hardiers as it comes into contact with steel cooling plates. Mr Saulnier had used the foam in designing an unmanned boat called the Hammerhead while working for a local shipyard called AF Theriault & Son. They are drone boats that the navy uses for targets," Mr German said. "They perform swamp exercises with these boats, where ten or fifteen boats swam a big naval ship. He knew, therefore, that the foam was light and tough. They bought several of these boats, where ten or fifteen boats swam a big naval ship. They held an open house this week, attended by 1,200 curious locals. Mr German is looking for investors so that they can build more houses and in the meantime they are testing the properties on Airbnb.

Sri Lankan leader orders hangings

President Sirisena of Sri Lanka has ordered the execution of four drug traffickers in the next two weeks, ending a 43-year moratorium on the death penalty.

It will be implemented soon and we have already decided that cigarettes and conventional cigarettes so dangerous. Vaping is even recommended for adult smokers by Public Health England, which says that it is 95 per cent safer.

E-cigarettes, or vapes, contain high levels of nicotine, but have just a fraction of the toxins that are present in conventional cigarettes so dangerous. Vaping is even recommended for adult smokers by Public Health England, which says that it is 95 per cent safer.

Tom Knowles San Francisco

Medical experts have criticised the decision by San Francisco to ban the sale of e-cigarettes, saying it could push adults back towards smoking tobacco.

It will become the first big city in America to ban the sale of e-cigarettes as it tries to curtail a rise in "vaping" among teenagers, which it calls an "epidemic."

The measure requires the approval of London Breed, the mayor, but once implemented it will outlaw their sale in shops and by online delivery to addresses in the city.

Other cities and states have tried imposing their own restrictions. In Nebraska, the school district of Fairbury is forcing its students to submit to random nicotine testing if they want to take part in extracurricular competitions.

Experts on nicotine addiction have been left baffled by the San Francisco ban, which they point out does not in fact ban the sale of normal cigarettes or even e-cigarettes filled with cannabis.

Neil Benowitz, a leading expert on nicotine and a professor of medicine at UCLA, said he was “disappointed and frustrated” by the decision.

“While I am sympathetic with the parents’ concerns, whether e-cigarettes use by adolescents is bad, as opposed to being a bad, and if there are any long-term harms for e-cigarette use in youth are unknown,” he said. “On the other hand, we know that if a smoker decides to quit smoking using e-cigarettes, and use e-cigarettes daily, e-cigarettes can be very helpful in aiding that quitting.”

Will Pavia New York

More than a thousand people gathered on the southwest shore of Nova Scotia this week to see what is thought to be a world first: a house built of recycled plastic bottles.

The house, a 2,000sq ft, three-bedroom bungalow on a grassy plot by the sea, used 612,000 water and fizzy drink bottles. The builders plotted its construction over a year, buying the building blocks from a company called Armacell that turns plastic bottles into lightweight foam board used to make the blades of wind turbines.

“What we asked to speak with their housing,” said Joel German, 31, a seafood entrepreneur who has set up a bottle construction company called JD Composites with David Saulnier, a boat builder. “Their sales guy laughed and said ‘No one builds houses out of this.’”

Plastic bottles are reduced, in the re...
